

Failed Queue Notifier

Dynamics 365 Business Central

The Failed Queue Notifier extension for Business Central provides a streamlined interface for managing background tasks and automated processes. It enhances visibility and control over job queue entries, making it easier for users to monitor, troubleshoot, and optimize recurring operations.

Main features

Automatic notifications to configured users when job queue entries fail

Automatic restart of failed job queue entries

Faster identification and resolution of job failures

Real-time status tracking and filtering

Extension empowers Business Central users to automate and monitor background tasks with ease, reducing manual effort and ensuring critical processes run reliably - even when errors occur.
