

CentralPlus

for Dynamics 365 Business Central

CentralPlus is a powerful enhancement suite for Microsoft Dynamics 365 Business Central, designed to streamline financial, inventory, and document workflows. It introduces localized document layouts, advanced ledger correction tools, and automation features tailored to meet the operational and compliance needs of Estonian businesses.

Main features

Localized Document Layouts – Adds Estonian-compliant report designs for various sales and purchase documents, including invoices, orders, and quotes

Dimension Corrector – Extends the standard dimension correction functionality to allow updates in item, customer, and vendor ledger entries, not just general ledger entries

Automatic Reservation on Transfer Orders – Introduces a setting that automatically reserves goods on transfer order lines, eliminating manual steps

Mandatory Fields for Items – Allows configuration of required item fields via item categories, ensuring data completeness before items can be used

Invoice Posting per Line allows users to post sales and purchase invoices with separate general ledger entries for each item or fixed asset line, rather than summarizing them.

Extension helps organizations improve accuracy, efficiency, and control across core business processes—all within the familiar Business Central environment.
