

# Related Goods Manager

## for Dynamics 365 Business Central

Related Goods Manager is a Business Central extension that enables companies to automatically manage and track related and special items—such as packaging or returnable goods—on sales and return documents.

### Main features

Define related product groups and assign them to customers

Automatically add related items to sales and return orders

Configure item-to-item relationships directly from the item card

Adjust related item quantities dynamically based on main item quantity

Track special item shipments and expected returns via customer history

Full visibility into special item balances and entries

This solution simplifies the setup of item relationships, automates the inclusion of related goods in sales processes, and provides full traceability of special items expected to be returned by customers.
