Alternative Units
for Dynamics 365 Business Central

Alternative Units is an extension for Business Central that enables users to define and manage relationships between different units of measure. This functionality supports accurate conversion and display of item quantities across various documents while maintaining the precision of the base unit.

Key features

Setup and management of alternative units of measure

Calculation of relative unit quantities

Logging and tracking of unit conversions

Defining rounding tolerances

Display of alternative units on purchase, sales, and transfer documents

Alternative Units helps Business Central users manage quantities and conversions more accurately, reducing manual work and increasing the reliability and efficiency of workflows.
