Advanced Item Attributes
For Dynamics 365 Business Central

Advanced Item Attributes extends Microsoft Dynamics 365 Business Central with advanced item attribute management. It enables users to filter, assign, and update item attributes across sales, purchase, production, and transfer documents, supporting attribute-based selection and automation.

Key features

Attribute-based item filtering and selection in all major document types (sales, purchase, production, transfer).

Bulk update and synchronization of attribute filters for items and document lines.

Attribute set management for items and categories.

Automated attribute assignment and filtering on document creation and modification.

Configurable attribute visibility and actions on pages.

Integration with standard Business Central processes.
